

Dashboard Narrative March 2017

Unfortunately despite further requests, we are unable to publish the vaccine information; as such this information is hidden from the public dashboard. This information will still count towards the outlier totals and will be available to view on the private dashboard which is published on the Intranet.

Primary Care Webtool Outliers has been added to the Dashboard, this is the outliers from the NHS England tool. This information has been checked with the Medicines Management and any items that are duplicated (i.e. under the Quilt) have been removed.

There have not been significant changes to practice performance since the last Dashboard review in January.
